No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

amplification or immuno assays), particularly for diagnosis of digestive, non-immune defensive, endocrine or immune system disorders. A particular application is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hSSP. The protein is also useful as antifungal, antibacterial, antiparasitic and antiviral expressing it, are used in screening tests to identify specific (ant)agonists, e.g. antibodies (Ab), polypeptides and antisense nucleic acids, which are potentially useful for treating conditions associated with excessive hPSP production. Cells containing the DNA are used to express the recombinant production and this can be used to raise Ab, useful for diagnosis, therapy, for affinity purification and to identify

```
This represents a human parotid secretory protein (HPSP). Antagonists that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or gastrointestinal tissue, e.g. cancer of salivary gland, thyroid, prostate, breast, gastroiditis, insulin-dependent diabetes, pancratitis, uscarative colitis, forbid sideses and atrophic gastritis. Host cells conteating vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to screen for its antagonists. Antibodies are useful directly as antagonists, to transport drugs to HPSP-expressing cells, to detect cells that express HPSP to monitor patients being treated with HPSP may from natural sources. Expression of HPSP may colect the expression of HPSP from natural sources. Expression of HPSP may to detect HPSP-encoding sequences (optionally after amplification by PCR) by hybridiaation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                       secretory tissue; gastrointestinal tissue; HPSP, Sjorgen's syndrome; Graves disease; thyroiditis; insulin-dependent diabetes; pancreatitis; ulcerative colitis; Crohn's disease; atrophic gastritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                              therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, brain disorders, skeletal muscle disorders, eye disorders, cobesity, mitochondriocytopathies, diabetes, atherosclerosis, neurodegenerative disorders, graft rejection, Alzheimer's disease,
                                                                                                                                                                                                                                                                                  This sequence represents a human secreted protein amino acid sequence. The invention relates to sequences AAA8775-A8774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the sequence proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for identifying features of the CDNA sequences using a computer programme. The cDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins. The cDNAs may also be useful in diagnostic, forensic, gene
                                                                                                                                                                                                  Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    dlgvlgkssawglakqkaqeaekllnnviskllptntdifglkisnslildvkaepiddq 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to 49 Secreted proteins and the cDNAs encoding them. The protein and nucleic acids may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            49 Secreted proteins and the nucleic acids encoding them, useful in gene therapy and for detecting similar sequences in samples \cdot

measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #9264 encoded by prube for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid

                                                                                                                                                    The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABGO0010-ABG30277 represent novel human
                                                                                                                                                                                                                                                                                                                       diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human: pancreas; pancreatic cancer; pancreatic cancer antigen; detection; dagnosis; identification; cytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological; antiinflammatory; cardiant; gene therapy; chromosome mapping; linkage analysis; issue identification; tissue typing; forensic; neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.

                                                                                                                                              Agonists and antagonists to the antigens can be screened for The pancreatic disorders, especially concernation to the antigens can be screened for The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestina) pulmonary, cardiovascular, renal or proliferative disorders. AAC99212 to AAC99240 and AAB6467 represent sequences used in the exemplification of the present invention.
neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, appraechlogical, cardiant and antihiflammarcry activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent explains of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. A caces is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies
                                                                                            specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher evelxyptes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ24811-Z24907; amino acid sequences AAX41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological

conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 95 polynucleotides, based on which tissues they are most highly expressed in (see AAZ14811 for described uses).
                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cartivity, and can be used in AAMM9121. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treathers and polynucleotides may be used in the prevention. (I) expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting protein. (I) proteins and polynucleotides may be used to produce the secreted (I), and inserting cancers and cancer metastases of haematopoletic-derived cells. AAK64703 cancers and cancer metastases of haematopoletic antigen genomic sequences from the present invention. AAK4942 to AAK87694 represent invention. AAK4942 to AAK87690 and AAMM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and reatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK4942 to AAK84950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention relates to novel genes (ABAll004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, marrow, breast, gastrointestinal tract, liver, lung, or urogenital. (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischammias;
                                                                                                                                                                                                                                                                                                                                              (d) wound healing: (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human: prostate cancer antigen; cytostatic; uropathic; diagnostic; reproductive system; chromosomal marker; forensic; urinary disorder; chronic nephritis; blood-related disorder; thrombosis.
useful for preventing, diagnosing and/or treating nervous system

```

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the reproductive system including prostate cancer and also for testing and detection e,g, diagnosis WPI; 2001-451929/48. N-PSDB; AAS40209.

Ruben SM:

Rosen CA, Barash SC,

Claim 11; SEQ ID No 361; 546pp; English.

polynucleotides (1) and polypeptides (11). (1) and (11) are useful for preventing, treating or ameliorating a medical condition when administered. (1), (11) and the antibody to (11) are useful for treating, preventing and or prognosing disorders related to the reproductive neptratisis, and blood-related disorders e.g. thrombosis. (11) can be used for testing and detection e.g. as a chromosomal marker and in forensics. (11) and the anti-(11) antibody can be used in testing and detection in immunoassays. AAU22700-AAU32913 represent the human prostate cancer antigen amino acid sequences of the The invention relates to novel isolated human prostate cancer antigen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         number of human reproductive system related antigens. These can be use
in the prevention and treatment of reproductive system disorders,
including cancer. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; foetal liver; gene expression; single exon nucleic acid probe.

Human brain expressed single exon probe encoded protein SEQ ID NO: 31052.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                     probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #5811 encoded by probe for measuring placental gene expression.
                                                                                                   Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

The present invention describes human secreted proteins encoded by polynucleotides obtained from adult testes, foetal brain, adult brain, bain (foetal and adult), foetal kidney, adult spleen, and adult thymus brain (foetal and adult), foetal kidney, adult spleen, and adult thymus con an interest that the polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, biological activities which would make them suitable for treating, broughsted activities include nutritional activity, cytokine and cell compressing activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activity, haematopoiesis regulating activity, clemokinetic activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for gene therapy. Therapeutic compositions are also presently valuable for veterinary applications. AAZ52815 to AAZ52818 encode human secreted proteins, given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides and proteins having biological activities which make them suitable for treating, preventing or ameliorating medical conditions in humans or animals
                                                                                                                                                                                                                                                       Human, secreted protein; immunostimulatory; haemostatic, cytokine, proliferative; differentiative; chemotactic; chemokinetic; vaccine; thrombolytic; antlinflammatory; cytostatic; immunosuppressive;

The invention relates to isolated polynucleotide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (1) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genefic disorders or other traits to assess biodiversity amino acid sequences of the invention.

The sequence adra for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO.

The pub. The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in idegnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                            Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2.8%; Score 7; DB 22; Length 113; 100.0%; Pred.                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations are produce other types of data and products dependent on DNA and and approach and order types of data and products dependent on DNA and adjacents in a product of the control of mutations and to produce other types of data and products dependent on DNA and adjacents in the polyperion of the types of data and products dependent on DNA and adjacents in the polyperion of the types of data and products dependent on DNA and adjacents in the product of the types of data and products dependent on DNA and adjacents in the polyperion of the types of data and products dependent on DNA and adjacents in the polyperion of the types of data and products dependent on DNA and and the product of the type of the types of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostic amino acid sequences of the invention.
Note: The sequence data for this patent did not appear in the printed
specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                      Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 2.8%; Score 7; DB 22; Length 130; Best Local Similarity 100.0%; Pred. ```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG3037 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                      Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated reagion (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, quent theretay and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

(II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and (II) may be used to treat disorders associated with decreased polypeptide expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPs, by expressing inactive proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Panzer SR, Spiro PA, Banville SC, Shah P, Chalup MS, Chang SC; Chen A, D'Sa SA, Amshey S, Dahl CK, Dam TC, Daniels SE; Dufour GE, Flores V, Fong WT, Greenawalt LB, Hillman JL, Jones AL; Liu TE, Roseberry AM, Rosen BH, Russo FD, Stockdreher TK, Daffo A; Wright RJ, Yap PE, Yu JY, Bradley DL, Bratcher SR, Chen W; Cohen HJ, Hodgson DM, Lincoln SE, Jackson S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotides encoding diagnostic and therapeutic proteins, e.g. enzymes, hormones and receptors, useful in diagnostics and therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to polynucleotides (I) encoding diagnostic and therapeutic (DITHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and
Human; receptor; diagnostic; therapeutic; gene therapy; vaccine; cell proliferative disorder; Crohn's disease; lymphoma; leukacmia; acquired immune deficiency syndrome; AIDS; autoimmune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 27; Page 522; 522pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2000US-0205323.

```
or supplementing the patient's own production of them. (1) and (11)

may be used to treat diseases, for example, cell proliferative disorder,

crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma,

leukaemia, autoinmune disorders, and respiratory disorders. Additionally,

(1) may be used to produce the DITHFS, by inserting the nucleic acids

into a host cell and culturing the cell to express the protein. (1) and

its complementary sequences may also be used as DNA probes in diagnostic

samples, and therefore which patients may be in need of restorative

camples, and therefore which patients may be in need of restorative

therapy. (II) may also be used as antigens in the production of

antibodies and activity. The anti-DITHP antibodies and antagonists may

also be used to down regulate expression and activity. The anti-DITHP

antibodies may also be used as diagnostic agents for detecting the

presence of DITHPs in samples (e.g. by enzyme linked immunosorbant

assay (ELISA)). AAU19415-AAU19652 represent human diagnostic and

therapeutic (DITHP) polypeptides of the invention.

The invention relates to novel isolated nucleic acid molecules encoding of protein coupled receptors termed nGPCR-x. nGPCR-x polynucleotides.

C polypeptides, and modulators may be used in the treatment of diseases and conditions such as infections, such as viral infections caused by HIV-1

(human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, anorexia, hypotension, hypertension, myocardial infarction.

C atherosclerosis), parkinson's disease, and psychotic and nervological disorders, including schizophrenia, migraine, major cheresion, anxiety, mental disorder, manic depression, and dyskinesias, such as Huntington's disease or Pourette's Syndrome and many other diseases and syndromes listed in the specification.

C nofPCR-x polynucleotides and polypeptides, as well as nGPCR-x modulators, may also be used in diagnostic assays for such diseases or content of the procession of the proces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                          ŏ
                                                                                                                                                                               qq
                                                                                                      capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3051), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                 genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY34584-Y25879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading
                        New isolated nucleic acid detection reagent for detecting 1000 or more
                                                                                                                                                                                                                                                                                                       Gaps
                                                                                             The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sinusitis, purulent otitis media; erythema nodosum: pharyngitis; vaccine; neutralising epitope.
                                                                                                                                                                                                                                                                                                        ..

Human, G-protein coupled receptor; GPCR; mental disorder; schizophrenia; attention deficit disorder; anxiety; depression; bipolar disorder; mentalous disorder; metabolic disorder; Huntington's disease; dementia; obesity; anorexia; metabolic disorder; Parkinson's disease; Tourette's syndrome; thrombosis; type 2 diabetes; cardiovascular disorder; myocardial infarction; cancer; cardiomyopathy; atheroscierosis; human immunodeficiency virus; HIV; viral infection; immunostimulant; neuroleptic; nootropic; tranquiliser; antidepressant; anorectic; gene therapy.
frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                                                       polypeptides and in screening for compounds that modulate GPCR activity. By screening a human subject for the presence of mutations in GPCR DNA, a GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, dementia and bipolar disorder, neurological disorders such as metabolic disorders such as obseity, anorexia and type 2 diabetes, cardiowascular disorders such as thromosis, myocardial infarction, cordiomyopathy and atherosclerosis, viral infections caused by HIV and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a method of identifying compounds that modulate a newly identified mar regulated (NIMR) polypeptide activity. The method comprises contacting an NIMR polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the modulators. NIMR nucleic acids and polypeptides are used in the treatment of microbial infections, and in screening for modulators of NIMR expression and activity. These modulators can be used to reduce the infectivity of a microbe on a surface, and the virulence of a microbe in a subject suffering from an infection. AAU29329-AAU29379 represent
                                    (GPCR) polypeptides of the invention. The proteins and their associated DNA sequences can be used to identify compounds which bind to {\sf GPCR}
                 Sequences AAU25554-AAU25616 represent human G-protein coupled receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying compounds that modulate a newly identified mar regulated polypeptide activity, useful as antimicrobial compounds, involves contacting the polypeptide with a test compound \cdot

The present invention describes cells originating in bone marrow or umbilical blood cells which are capable of differentiating into cardiomycotytes. Also described are: (1) cardiomycotytes produced by the differentiation of the cells; (2) a method for carrying out the differentiation into cardiomycotytes; (4) drug councinal and/or into cell types other than cardiomycotyes; (4) drug compositions into cell types other than cardiomycotyes; (4) drug compositions promoting the formation of heart muscle and regeneration of heart tissue which contain the cells; (5) a method for the production of antibodies which recognise the cells; (5) a method for screening factors which promote the proliferation of the cells; (7) a method for immortalising the treatment of heart disease which contain the immortalised cells; and (9) cell-free supernatant from the culture of the cells and its use in promoting their differentiation into cardiomycotytes. The cells are used in the treatment of diseases involving heart muscle degeneration, such as myocardial infarction and in the study of cardiomycotyte.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cells capable of differentiating into cardiomyocytes and originating in

The cells are applicable as remedies for various heart diseases particularly with damaged heart muscle accompanying degeneration. The present sequence was used to illustrate the present invention.

The present invention provides cells originating in the human bone marrow or umbilical blood cells which are capable of differentiating into cardiomycoytes. These cells are useful in the treatment of diseases involving heart muscle degeneration, such as myocardial infarction, and the study of cardiomycoyte differentiation. The present sequence is a protein described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cells capable of differentiating into cardiomyocytes and originating in bone marrow or umbilical blood cells for study of cardiomyocyte differentiation and treatment of heart disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
    This sequence is an ixodes scapularis polypeptide of the invention.

The proteins of the invention are 15 tick Salp proteins. The proteins. The proteins antibodies against them or planmaceutical composition comprising a fusion protein or a multimeric protein and at least one additional non-ixodes capularis polypeptide, can be administered to a subject to confer tick immunity and therefore prevent infection by a tick-borne disease. Inhibiting acceptation factor Xa activity comprises administering to a subject a polypeptide selected from Salp14A, Salp9A or a fragment of these having Xa inhibiting activity, inhibiting histamine activity comprises administering a cativity, inhibiting histamine binding fragment to a subject, and inhibiting or preventing an inflammatory response comprises administering a polypeptide selected from a Salp15, and protein or its immunogenic fragment may be used to produce monoclonal antibodies that are screened for their ability to confer tick immunity when used to immunise naive animes. The autibody can be used to screen for expression of I. scapularis polypeptides, either in the profice.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         other samples in which proteins may be present, and for purifying or removing polypeptides from a given sample to block or bind to specific epitopes on the polypeptides and to direct various molecules, such as

growth factor (TGF) alpha malaged. TGF-alpha HIII. The protein can stimulate angiogenesis, embryogenesis, cell differentiation and function. It can be used for therapeutic purposes for restoration or enhancement of neurological functions diminished as a result of trauma or other damaging pathologies such as AIDS dementia and senile dementia, to treat coular disorders, e.g. corneal inflammation, to destroy target cells, to treat tumours, kidney or liver disorders or to treat wounds, burns or ulcers. The polypeptide can also be used in the modulation of angiogenesis, bone resorption, immune response, and synaptic and neuronal effector functions, or the arachidonic acid cascade. It can also be used in apperproliferative disorders such as inflammation or psoriasis and for alopecia, hair loss or other skin conditions which affect hair follicular development. Anragonists to TGF-alpha-HIII can be used for treating tumours or skin disorders such as sporiasis. The products can also tumours or skin disorders such as sporiasis. The products can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transmembrane protein; human; cell membrane; proliferation; diagnosis;

                                                                                                                                                                                                                                   All of the proceins exist in the cell membrane, so are considered to be proteins controlling the proliferation and differentiation of the cells. They may be useful as carcinostatic agents or as antipagns for preparing antibodies against the proteins. The CDNAs can be used as probes for gene diagnosis and gene sources for gene therapy, as well as for large-scale expression of the proteins. The HPO149B (see AAY1333) protein may be associated with apoptosis, and therefore useful in inhibition of apoptosis. The HPO1962 (see AAY13943) protein can be used to treat diseases associated with
                                                                                                                                                                                                                                                                                                                            phopshatidylethanolamine N-methyltransferase. The proteins are identified by the presence of a hydrophobic transmembrane region, knowledge of the protein function is not required, as in e.g. methods of

This sequence represents the EGF-like homologue PRO240.

The invention relates to autibodies (Ab) that bind to any of the prolypeptides (1) designated PRO187; PRO533; PRO2149; PRO240; PRO211; PRO240; PRO216; PRO246 or EBAF-2. The Ab, or other agents that inhibit expression and/or activity of (1) are used: (1) to inhibit growth of tumours; and (il) as diagnostic/prognostic reagents for detection or quantification of (1) in cells or tissues, by standard immunoassays, with overexpression being indicative of cancer. For therapeutic use, the Ab may be conjugated to a toxin, chemotherapeutic agent or radioisotope. Genes expressing (1), many of which are growth factor homologues, are overexpressed in some cases of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; immune related disease; diagnosis; antiinflammatory; cardiant;

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic infammatory myopathies, Sjogren's systemic vasculitis, sarcoidosis, autoimmune haemolytic annaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune-mediated skin diseases, allergic diseases, immune-mediated skin diseases, allergic diseases, immunological diseases of the lung, and transplantation associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gurney AL, Hebert C, Henzel W; D, Shelton DL, Smith V; Wood WI, Yan M;

This sequence represents a human PRO240 amino acid sequence. PRO240

Shares Sequence homology with the D. melanogaster serrate precursor

protein and the Gallus gallus C-serrate-1 protein. The PRO240 gene is

located on chromosome 2. The invention relates to isolated antibodies

which bind to a polypeptide. The "PRO" polypeptides are encoded by genes

which are over expressed in the genome of tumour cells. Vectors and host

cells comprising the nucleic acid encoding the antibodies are used in the

production of the antibodies. The antibodies and nucleic acids encoding

them are used for diagnosing a tumour na mammal. The antibodies are

used for inhibiting the growth of tumour cells and identifying compounds

that inhibit a biological or immunological activity of and/or expression

of a PRO187, PRO533, PRO214, PRO240, PRO211, PRO240, PRO211, PRO246 or

RR0317 polypeptide. The antibody can be used in antibody dependent enzyme

mediated prodrug therapy (ADEPT) by conjugating the antibody to a

mediated prodrug the argyme which converts a prodrug to an anti-cancer

drug. The antibodies can be fluorescently labelled and monitored by light

microscopy, flow cytometry or fluorimetry for diagnosis and prognosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibody; PRO187; PRO533; PRO214; PRO240; PRO211; PRO230; PRO261; PRO246;
diseases including graft rejection and graft-versus-host-disease. AAC58397 to AAC58578 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAC58579 to AAC58642 and AAB33414 to AAR33477 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PRO317; tumour growth inhibitor; cancer; diagnosis; treatment; human; cell growth proliferation; serrate precursor; C-serrate-1; ADEPT; antibody dependent enzyme mediated prodrug therapy; chromosome 2.
                                                                                                                                                                                                                                 Gaps

arteriosclerosis), anglogenic disorders (e.g. corneal graft neovascularisation and diabetic retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis (full details given in specification). Additionally, the nucleic acid may be used to produce the secreted polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. It may also be used as a DNA probe in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The polypeptides may also be used as antigens in the production of antibodies against Trg alpha HIII antibodies may also be used as diagnostic agents for detecting the presence of TGF alpha HIII antibodies may also

PRO240 (25 kDa, pl 7.83) shows sequence homology to chicken C-serrate-land Drosophila serrate precursor protein. Expression was observed in lung cancer, 8 squamous corrections. Expression was observed in lung cancer, 8 squamous corrections as and in 6/8 adenocarcinomas, in stu and infiltrating components. The invention provides polynuclectides (see AAR30050-62) encoding novel human PRO proteins (see AAB20108-20) including proceeding novel human PRO proteins (see AAB20108-20) including proceeding novel human PRO proteins comprising these proteins or their agonists are useful for increasing infiltration of inflammatory cells into a tissue of mammal, stimulating or enhancing an immune response, or increasing the proliferation of 7-1 pumphocytes in a PRO pulpeptide or its antagonist have the opposite effect. A claimed method for treating an immune related disorder, such as a T calaimed method for treating an immune related disorder, such as a T calaimed method for treating an immune related disorder, such as a T calaimed method for treating an immune properties is selected from systemic inflammatory myopathy, Sjogren's syndrome, systemic sclerosis, idopathic inflammatory myopathy, Sjogren's syndrome, systemic control arthritis, sound) loarthropathy, systemic sclerosis, idopated control arthritis, diseases (such as multiple sclerosis), autoimmune heamolytecamenia thyroiditis, diabetes mellitus immune-mediated skin diseases (such as multiporme and psoriasis), autoimmune chronic active hepatitis, diabetes mellitus, inflammatory bowel disease (ulcerative colitis and Crohn's disease), gluten sensitive enteropathy, whipped saisease, (auto)immune-mediated skin diseases (such as sathma, allergic thinitis, food hypersensialivity and urtiforme and psoriasis), diseases of the lund and trans and trans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              kenazi AJ, Baker KP, Fong S, Goddard A, Godowski PJ, Gurney AL;

Claimed methods of diagnosing these disorders comprise detecting the level of expression of the PRO gene. Also claimed are a method of identifying a compound capable of inhibiting the expression or activity of the PRO polypeptide, vectors, host cells, antibodies, and a method of stimulating an immune response in a mammal using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New PRO polypeptides, nucleic acids and (ant)agonists, useful for diagnosing and treating immune-related disorders, such as multiple sclerosis, rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Seguence
